

Internal training – "Oracle SQL, PL/SQL, and Advanced Database Optimization and Security"

This course provides comprehensive training in Oracle database administration, from the fundamentals to advanced techniques. It covers Oracle's internal architecture, the creation and management of objects such as tables, indexes and views, and a review of basic SQL syntax. It also focuses on advanced PL/SQL, query optimization, transaction management, and database security. Participants will learn how to use tools such as Oracle Enterprise Manager, how to perform performance tuning, and how to integrate Oracle with external applications. In addition, innovations in Oracle are explored, such as its use in the cloud and development with Oracle APEX.

Internal training – "Oracle SQL, PL/SQL, and Advanced Database Optimization and Security"

This course will consist of 11 modules, each of which will be taught in 3-hour sessions.

The format of the sessions will be face-to-face in Room 1, every Wednesday from 3:00-6:00 pm until the 11 modules are completed, with the first module on January 22nd.

For those who cannot come to the office, they will be able to connect remotely through Teams.
